

Andrei Ataman - Assignment 1

- This is the home page, I tried going for a minimalistic/clean look for the website where every piece of text is stored on these gray islands.
- The colorscheme I tried to follow was [gruvbox](#).
- For the background-image I used the fixed property so that only the content is moved whenever the user scrolls.
- The inspiration for the navigation bar was from [w3schools](#).
- Throughout the whole website I used grid-template-areas to arrange the content on the page.

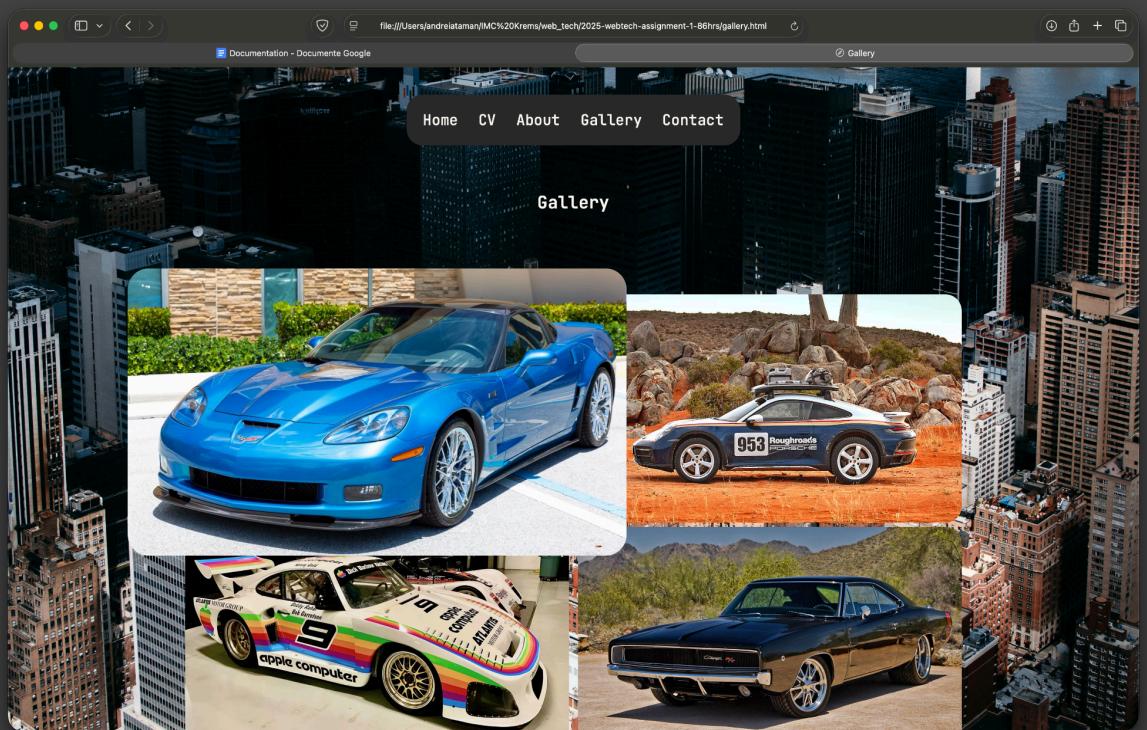

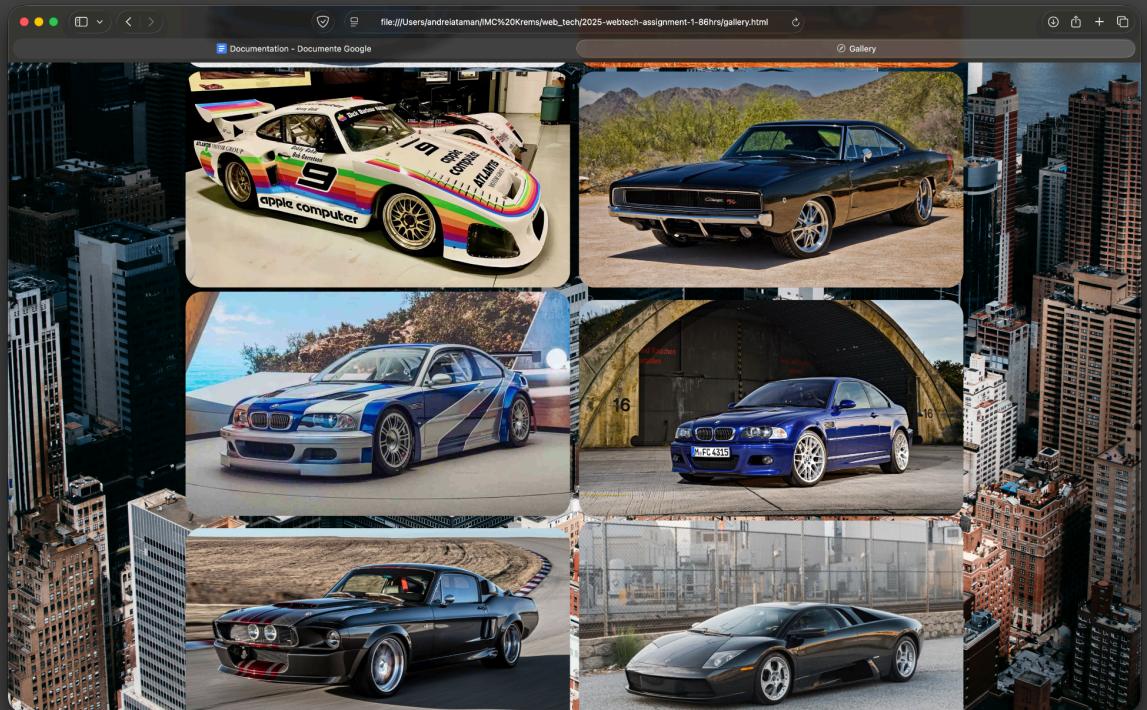

- The island design again is most present on the CV page
- The website's font is from google fonts. I copied the CSS line from their website and pasted it in the global.css so that the style is consistent across all pages. The font is JetBrains Mono.
- The navigation bar also has some on hover effects, where the color changes and the color change also has a transition animation.

- The about me page, for the "responsiveness" of the page I just hid the image and image description divs as I couldn't find a good way to arrange them when the browser width was small.
- For the image of the voxel renderer I added a on:hover transformation so that the image becomes a bit bigger as it's pretty hard to see all the details..
- For arranging the content I used grid-template-areas.

- This is the image gallery. Nothing fancy, 10 photos of cars where I also applied a on: hover transformation that scales the images and moves them a bit to the center of the screen

- This is the contact form, inspiration was taken from [w3schools](#)
